

To ensure the most effective and economic use of Germfree7 and to make sure that your area of responsibility is kept well disinfected, the following cleaning routine and protocol is recommended by Greenland Biotech Limited:

- 1. Coat the entire area thoroughly with Germfree7 (no dilution) by**
Either
Thoroughly wet the towel with Germfree7, then wipe on surface to form a thin layer of wet film on the surface.
Or
Direct spraying onto surface
Let the surface dry completely.
- 2. Re-apply and repeat every 7 days.**

Special note:

How to clean a surface already coated with Germfree7?

Make a diluted Germfree7 solution of one (1) part Germfree7 with three (3) parts water to clean the coated area and then immediately re-coat the surface with Germfree7 for protection enforcement.

Germfree7 can be used as routine cleaning / disinfecting agent in lieu of alcohol or diluted bleach.

If the coated surface is washed by detergents or other cleaning agents then immediately re-apply a new layer of Germfree7 coating.
