MGS laboratories is one of the most leading laboratory in UK specialize in testing the disinfectants. (Company web site: <http://www.mgslabs.co.uk>)
Our scientists summarized the technical part of the report into easy understandable facts:

1. Germfree7 can kill 99.999% of bacteria within one minute. (5 log reduction within one minute time)
2. The test has interference of Protein with the purpose of trying to resemble human living environment and has given the test result a more significant performance.
3. The strength of the bacteria used to challenge Germfree7 was 10 Power 9 which is on the high side of the challenger used in BS (British standard) testing.
